STANDARD OPERATING PROCEDURE · BY ROLE

Second and third counts how they work

For: Counters, count supervisors and inventory control · Full Harvest Inventory

When a first count disagrees with the inventory report, a different team goes back and counts the bin again: a **second count**. When the second count does not settle it, a third team counts it once more: a **third count**. This guide is how that works on the gun and on the dashboard.

7 — The 1st, 2nd and 3rd counts side by side 11

8 — When something is not right 12

1 — In one minute

- A second count is **blind**: you are told the bin and the kind of problem, never the numbers.
- It is never given to the team that did the first count; a third count goes to a team that did **neither**.
- **Count the whole bin** — every pallet in it. The gun moves on once every pallet expected there is counted; fewer there, tap **Bin done**.
- The latest count of a bin is the one that stands: a second count replaces the first, a third count replaces both.

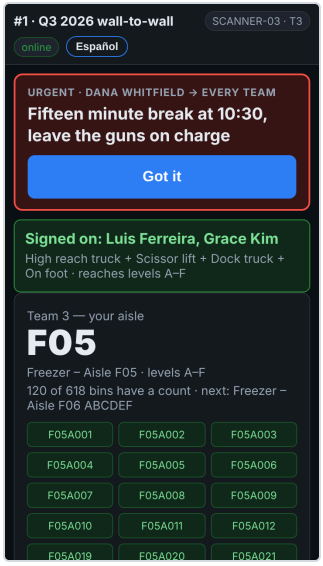

2 — Why a bin comes back

A bin is sent back for a second count when its first count:

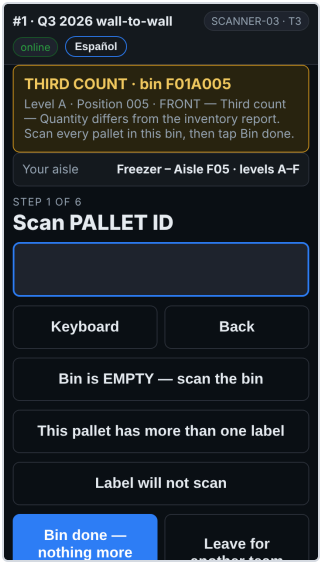

- found a **different quantity** from the report;
- found a pallet in a **different bin** from the report's — that bin comes back, and so does the report's own bin, to check for a second pallet with the same label;
- found a pallet that is **not on the report**;
- found a pallet that was also **counted in another bin**;
- or, when an aisle was finished, a pallet on the report was **never seen**.

A supervisor can also send any bin back by hand.

3 — On the gun

My aisle says *Second counts available*, with how many

THIRD COUNT · bin … — the bin and the reason, never the numbers

1. On the **My aisle** screen, **Second counts available** shows how many are waiting. Tap **Start second counts**.
2. The gun gives you the **nearest** first — in the aisle you are in, then nearby. The banner says **SECOND COUNT · bin …** or **THIRD COUNT · bin …**, and why.
3. Go to that bin and **scan every pallet in it**, the normal way: pallet, quantity, bin. Count everything in the bin, not only the pallet that brought you there. **One pallet scanned and Bin done tells the office the rest are gone.**
4. Nothing in the bin: **Bin is EMPTY**.
5. Once every pallet the report expects in the bin is counted, the gun finishes the second count by itself and moves to the next one. Fewer pallets there than that: tap **Bin done — nothing more here** when the bin is finished.
6. **My aisle** takes you back to your own aisle at any time; the second counts wait for you.

No signal? Keep counting. The lines and the *Bin done* wait on the gun and send when it is back in Wi-Fi.

4 — What the second count decides

Once a bin's second count is in, the second count's numbers are the bin's numbers on every report. Then:

THE SECOND COUNT AGREES WITH…	IT MEANS	THEN
the first count	The difference is real: two teams found the same thing	It goes to inventory control as an adjustment
the report	The first count was wrong	The line now matches — nothing to adjust
neither	Nobody knows which number is right	A **third count** (section 5)

Agrees means the same pallets in the bin, with the same quantities.

The second count is the whole bin. If a team scanned one pallet and tapped *Bin done*, the other pallets in that bin now read *Not found*. The fix is a **third count** of the bin (section 5), every pallet scanned; it stands over both earlier counts.

5 — Third counts

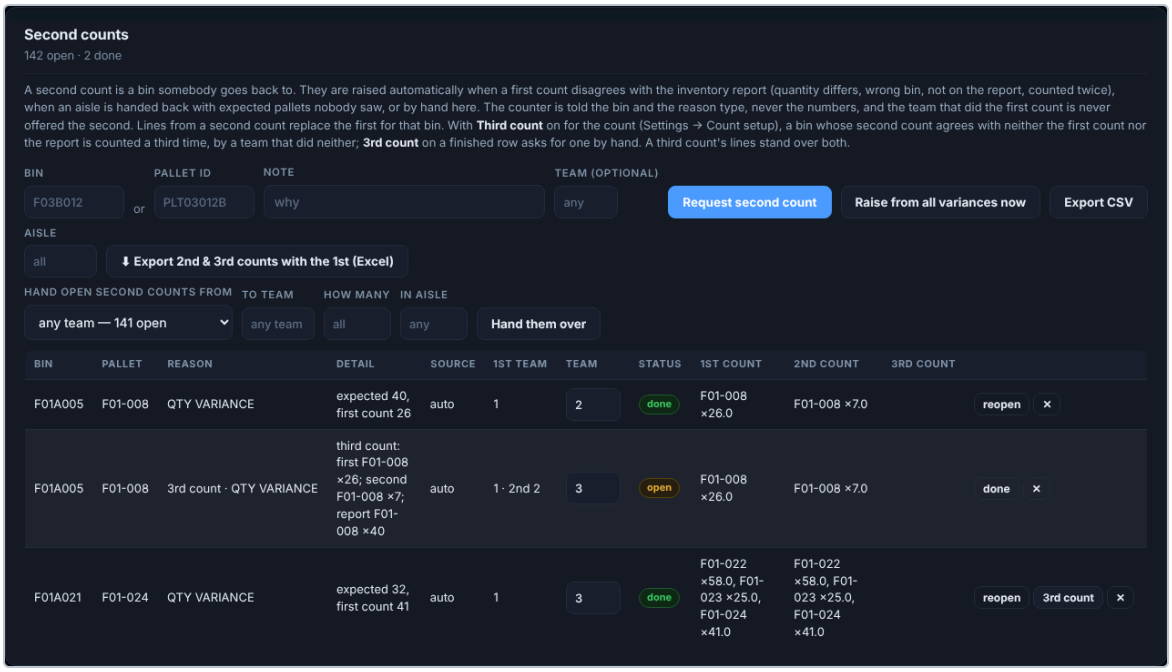

When a second count agrees with neither the first count nor the report, the bin goes back a **third** time:

- to a team that did **neither** the first nor the second count;
- on the gun it reads **THIRD COUNT · bin …** and is counted exactly like a second count;
- its numbers **stand over both** earlier counts.

On sites that raise them automatically this happens on its own. A supervisor can also ask for a third count on any finished second count, with the **3rd count** button on the dashboard.

6 — On the dashboard

Dashboard → Second counts lists every second and third count; the tab shows how many are open from anywhere on the dashboard. The same tab is under **Inventory Control** in the sidebar, beside Adjustments and Reports, with an overview of where the count stands in front of it.

A second count that settled nothing, the third count it raised (3rd count · …, with both earlier teams), and a second count that agreed with the first.

COLUMN	WHAT IT IS
Bin, Pallet	Where to go back to, and the pallet that raised it
Reason	Why — *3rd count · …* for a third count
Detail	The numbers, for the office only
1st team	Who did the first count (on a third count, also who did the second)
Team	Who has it; blank is any team allowed. A supervisor types a team and presses Enter to give it to them
Status	*open*, *taken* (a gun has started it), *done*
1st count, 2nd count, 3rd count	What each count found in the bin

Supervisors: **Request second count** sends a bin back by hand (type a bin or a pallet); **done**, **reopen** and × on each row; **3rd count** on a finished second count. Work the list to zero before the count is closed — a count closed with open second counts has known-wrong numbers in it.

6a — When one team does the second counts

On many counts one team does all the second counts — inventory control's, say. Then:

- **Every new second count is given to that team.** Its guns have them all; other teams' guns show *Second counts available* only for bins left open for them.
- The Second counts card says **new second counts go to team …**.
- A bin that team counted **first** never goes to it — another team does that one. A third count goes to it only if it did neither earlier count.

Without that option, a gun is offered the second counts handed to its team first, then every one nobody has yet — so *Second counts available* still shows the open pool, even after a few were handed to that team.

When that team is swamped, a supervisor hands some to another team with the bar above the table: **Hand open second counts from** *team 90* **to team** *4*, **How many** (blank for all), **In aisle** (optional), **Hand them over**. Bins a team has already started stay with it. On the gun, the handed-over ones simply appear under *Second counts available*.

7 — The 1st, 2nd and 3rd counts side by side

Dashboard → Second counts → ⬇ Export 2nd & 3rd counts with the 1st (Excel). Leave **Aisle** blank for every aisle, or type one for that aisle alone.

Q3-2026-wall-to-wall-second-and-third-counts-2026-10-23.xlsx

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	**Bin**	**Pallet**	**Report quantity**	**1st count**	**1st count team**	**2nd count**	**2nd count team**	**3rd count**	**3rd count team**	**Final count**	**Final count is the**	**Which number stands**	**State**
2	F01A005	F01-008	40	26	1	7	2			7	2nd count	Waiting for the third count	Open
3	F01A021	F01-022	58	58	1	58	3			58	2nd count	The second count agrees with the first	Done
4	F01A021	F01-023	25	25	1	25	3			25	2nd count	The second count agrees with the first	Done
5	F01A021	F01-024	32	41	1	41	3			41	2nd count	The second count agrees with the first	Done
6	F01A029	F01-033	55	55	1					55	1st count	Waiting for the second count	Open
7	F01A029	F01-034	62	0	1					0	1st count	Waiting for the second count	Open
8	F01A041	F01-053	35									Waiting for the second count	Open
9	F01A047	F01-062	58									Waiting for the second count	Open
10	F01C107	F01-053		35	1					35	1st count	Waiting for the second count	Open

The Side by side sheet (some of its columns): a row a pallet, for every bin counted again.

Each row has the report's quantity, the **1st, 2nd and 3rd counts** with the team that did each, the **final count** and which count it is, the final against the report, and **which number stands**: *the second count agrees with the first*, *…with the report*, *the third count stands*, or *waiting for…*. A 0 means that count was done and the pallet was not there; a blank means that count has not been done. A *Summary* sheet says how every bin was settled.

8 — When something is not right

YOU SEE	WHAT IT MEANS	WHAT TO DO
Second counts available never shows	Nothing is waiting for your team — or the gun signed on before they were raised	Tap **Refresh** on My aisle
This second count is for bin …	You scanned a different bin	Scan the bin in the banner, or tap **Bin done** if it is finished
a different team must do the second count	Your team did the first count of that bin	Leave it; another team takes it
a third team must do the third count	Your team did the first or second count of that bin	Leave it; another team takes it
A bin you finished still shows *taken*	*Bin done* has not reached the office yet	Get the gun into Wi-Fi; it sends by itself
Nobody can take a third count	Every team on the count did one of the earlier counts	A supervisor gives it to a team by name
Your team has no second counts, but there are plenty open	They are given to the second-count team	A supervisor hands some to your team (section 6a)
