Second counts

When: My aisle shows Start second counts

> When a first count does not agree with the report, the office sends a different team back to that spot to count it again, blind. You are not told the first count.

My aisle: Second counts available, and Start second counts.

A second count: go to the bin and count everything in it. It moves on once every pallet expected there is counted.

What to do

1. On **My aisle**, tap **Start second counts**.
2. The banner at the top says which bin to go to.
3. Count everything in that spot: rack label, pallet label, quantity, for every pallet. **Your count replaces the first count of the whole spot**: a pallet you do not scan is taken as gone.
4. Once every pallet the report expects in that spot is counted, the scanner finishes the second count by itself: *Bin … done — every pallet expected there is counted*, and the next one comes up.
5. Fewer pallets there than that, or none at all: tap **Bin done — nothing more here** when you have counted what is there. An empty spot: **Bin is EMPTY**.
6. You cannot get to it right now: tap **Leave for another team**.
7. Scanned a different bin by mistake? The scanner says *This second count is for bin …*. Scan the right one.

What the office sees

Your second count beside the first one on **Second counts**. When yours agrees with neither the first count nor the report, a third team may be sent.

Do not

- Do not ask what the first count was.
- Do not count only the pallet that was wrong: count everything in the spot. One pallet scanned and *Bin done* tells the office the rest are not there.
