STANDARD OPERATING PROCEDURE · BY ROLE

How to Employees, teams and gear sizes

For: Count supervisors and whoever keeps the crew list · Full Harvest Inventory

Everyone who counts has to be on the crew list: once it is loaded, a gun will not sign on with a clock-in number that is not on it. This guide covers keeping that list — adding, editing and removing people, one at a time or from a file — putting them on teams, and recording each person's department and jacket, bibs and boot sizes, with the totals to order from.

Printed October 27, 2026

Contents

1 — The four tabs 3

2 — Add an employee 4

3 — Edit or remove an employee 5

4 — The whole crew list from a file 7

5 — Teams 8

6 — Gear sizes, and the order 10

7 — Who may do what 11

8 — When something is not right 12

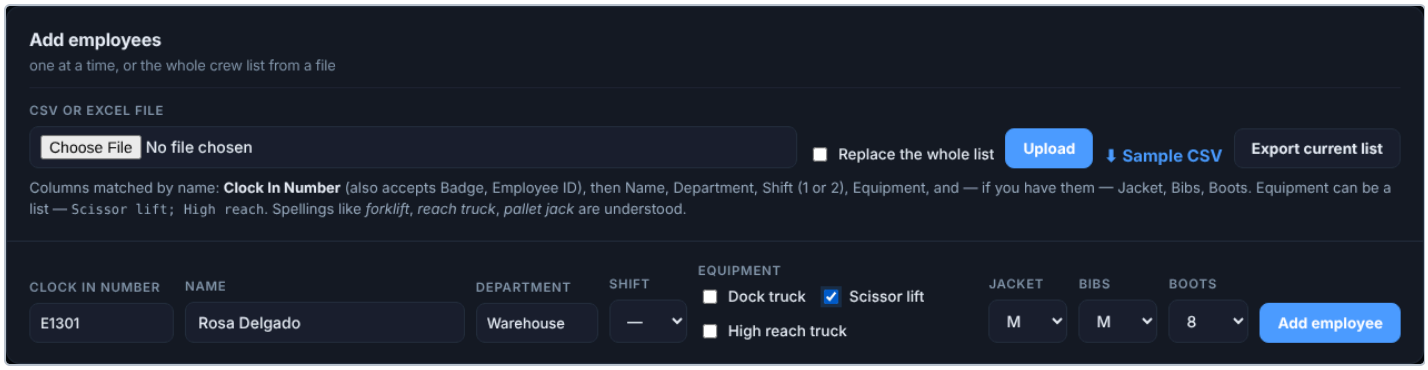

1 — The four tabs

Teams & crew has four tabs:

TAB	FOR
Teams	Who is on which team today: drag people onto teams, upload the team sheet, set each team's shift, the counting plan
Employees	The crew list itself: add, edit, remove, upload, export
Gear sizes	Everyone's jacket, bibs and boots, the totals, and the Excel export to order from
Equipment rules	Which levels need which equipment

2 — Add an employee

Teams & crew → Employees → Add employees.

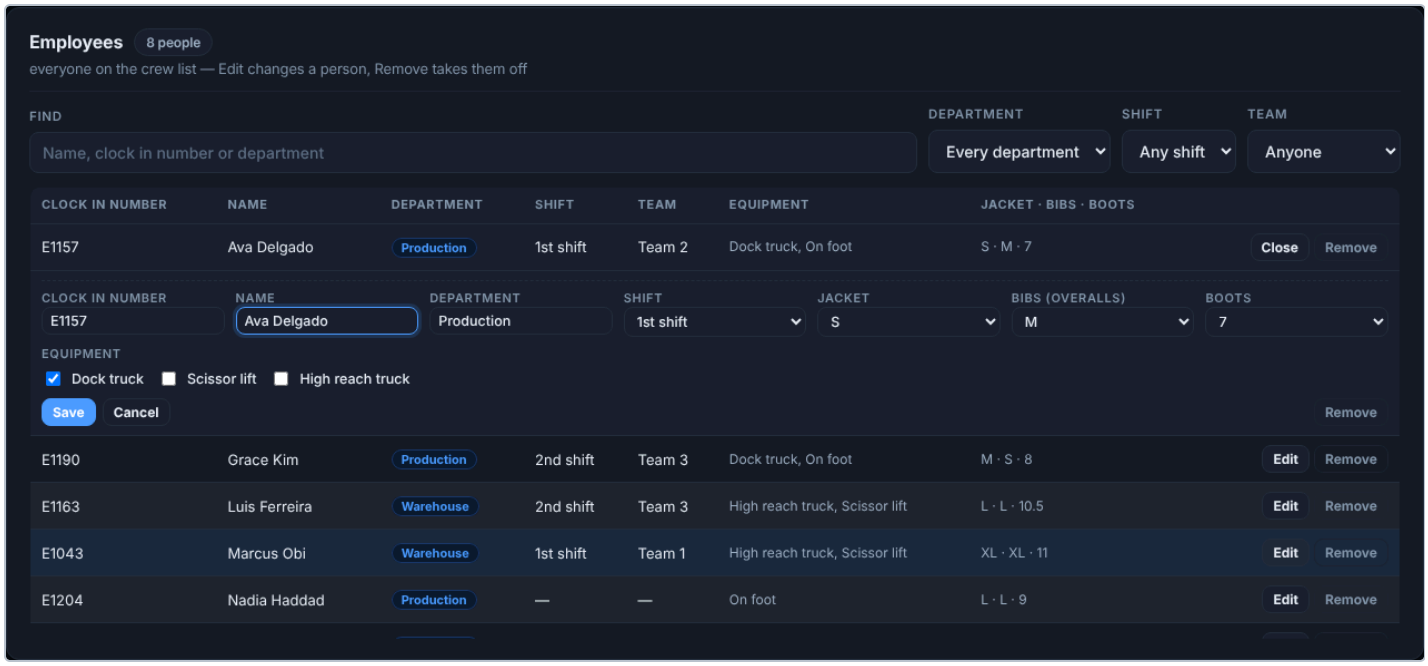

Add employees: one at a time on the bottom row, or the whole list from a file above it.

1. **Clock in number** — the number on their badge. Required.
2. **Name** — required.
3. **Department** — optional (*Warehouse*, *Production*, *Freezer*…); **Shift** — 1st or 2nd, optional. It shows as a chip on the person's card and a column in the list.
4. **Equipment** — tick what they are certified on. None ticked is on foot.
5. **Jacket**, **Bibs**, **Boots** — optional; they can be added later.
6. **Add employee** (or Enter in the Name box). The form clears for the next person.

A clock-in number that is already on the list is refused, with the name it belongs to — use **Edit** on that person instead (section 3). The new person can sign on to a gun at once.

3 — Edit or remove an employee

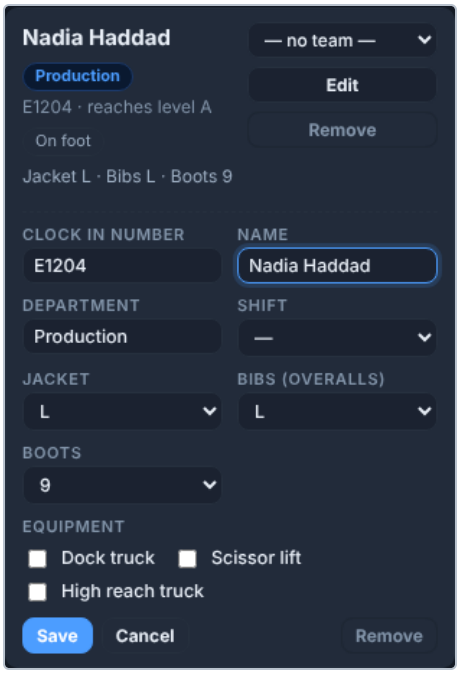

Teams & crew → Employees lists everyone on the crew list, whatever team they are on.

The Employees table, with one row open for editing.

- **Find** — a name, clock-in number or department. **Department**, **Shift** and **Team** narrow it (*No department*, *No shift*, *Not on a team*). The chip in the heading counts who is shown.
- **Edit** on a row opens the person under it: **clock-in number, name, department, shift, sizes and equipment**. Change what you need and press **Save** (or Enter); **Cancel** closes it. counts already scanned keep the number they were scanned under.
  - A **new clock-in number** asks first. Their team and their team-sheet seat go with them;
- **Remove** — on the row, or inside the Edit form. It asks first, takes them off the crew list and off their team. Their counts stay as they are. A removed clock-in number can no longer sign on.

The same **Edit** is on each person's card on the **Teams** tab:

A crew card on the Teams tab with Edit open.

Searching a person's name in the sidebar's search box lands on their row in Employees. Every add, edit and removal is in the log (*Settings → Backups & log*) with who made it and what changed.

4 — The whole crew list from a file

Teams & crew → Employees → Add employees → CSV or Excel file → Upload.

The columns are matched by name, in any order:

COLUMN	ALSO READ AS
Clock In Number (required)	Badge, Employee ID, Emp ID, Employee number
Name	Employee name, Full name
Department	Dept, Area
Shift	Shift no — 1 or 2, however it is written (*1st*, *first*, *day*; *2nd*, *second*, *night*)
Equipment	Certifications, Certified, Can operate — a list, *Scissor lift; High reach*
Jacket	Jacket size, Coat
Bibs	Overalls, Bib size, Pants
Boots	Boot size, Shoe size

- A person already on the list is **brought up to date**; a new one is added. Nobody is removed unless **Replace the whole list** is ticked.
- Sizes are read the way people write them: *xx-large* and *XXL* are **2XL**, *10 1/2* is **10.5**, a wide boot keeps its **W**. A file with **no size columns leaves the sizes already entered**.
- **⬇ Sample CSV** downloads a file in the right shape. **Export current list** downloads the crew list as it stands, sizes included.
- **⬇ Badge labels (Avery 5960, Word)** prints a label for each active person: their name, their clock-in number, and the number as a barcode the scanner's sign-on screen reads. Pick everyone or one shift, and 1, 2 or 3 of each person side by side. It fits Avery 5960, 5160 and 8160 — print at **Actual size**, not "Fit to page".

Employees and teams at once. Teams & crew → Employees → Crew workbook takes one Excel file with an **Employees** sheet and a **Teams** sheet — or one sheet with both sets of columns, a row per person with their team. **Check the workbook** says what does not match before anything changes: a person on a team who is not on the employees sheet, one clock-in number with two names, a person on two teams, a shift that disagrees with the team's. Fix the file, check again, then **Apply** loads both in one go. **⬇ Sample workbook** is the file to start from.

5 — Teams

Teams & crew → Teams.

- **Drag** a person from *Not on a team* onto a team card, or between teams — or use the menu on their card (on a tablet). **— no team —** takes them off.
- Every card shows the person's **department** chip, their equipment, their sizes, **Edit** and **Remove**.
- **Add team** makes a team (a number, a shift, notes). **The team sheet** (*Team #, Department, Employee, Equipment*, a row per seat) builds every team at once: *S1-DS01* reads as 1st shift, dock stocker, truck 01; a blank name is an open seat whose equipment still counts.
- **1st shift / 2nd shift** and **Department** above the board show one at a time.
- **The crew board** (`/crew`) puts the teams and their people on a wall screen by shift — 1st shift 6am–2pm, 2nd shift 2pm–10pm until an admin sets other hours, the one on now marked — with each team's aisle, its last scan, and **Scanning** or a red **Stopped scanning**. No sign-in, no clock-in numbers. It shows **one shift at a time**: the one on now by the clock, or the one fixed under **Settings → Site & systems → Crew board**, which also holds the **shift times** the clock is judged against, picks what each card shows and whether the list **scrolls by itself**, and how fast. Open it from the Dashboard's **Crew board ↗** chip; `?shift=2` pins a screen to one shift and `?scroll=0` stops the scrolling on that screen.
- **⬇ Export the teams (CSV)** downloads every team across both shifts, one row a seat, in the team sheet's own columns plus the shift, so the shifts compare side by side in Excel and the file uploads back after it is reworked.
- **🖨 Print team QR codes** prints a card for each team with its number as a QR code, three across a letter page. Pick **Every team**, **1st shift** or **2nd shift** in the box beside it first. At sign-on the counter scans the card into **Team number** on the gun instead of typing it; the number is printed large under the code, and under that as a Code 128 barcode — the kind on the rack labels — so a scanner set up for rack labels alone reads the card. Either code holds the team number and nothing else, so a lost card signs nobody in. It needs **Downloads** on the login, and the Log records who printed them.

Team number codes

3 teams · 1st shift · printed 2026-10-20 · cut along the dashed lines · each card carries the number as a QR and as a Code 128 barcode, the kind on the rack labels, so any scanner reads one of them

Print

TEAM · 1st shift

S1-DS01

Dock stocker · truck 01

Scan either code at sign-on, in **Team number**

TEAM · 1st shift

S1-DS02

Dock stocker · truck 02

Scan either code at sign-on, in **Team number**

TEAM · 1st shift

S1-RT03

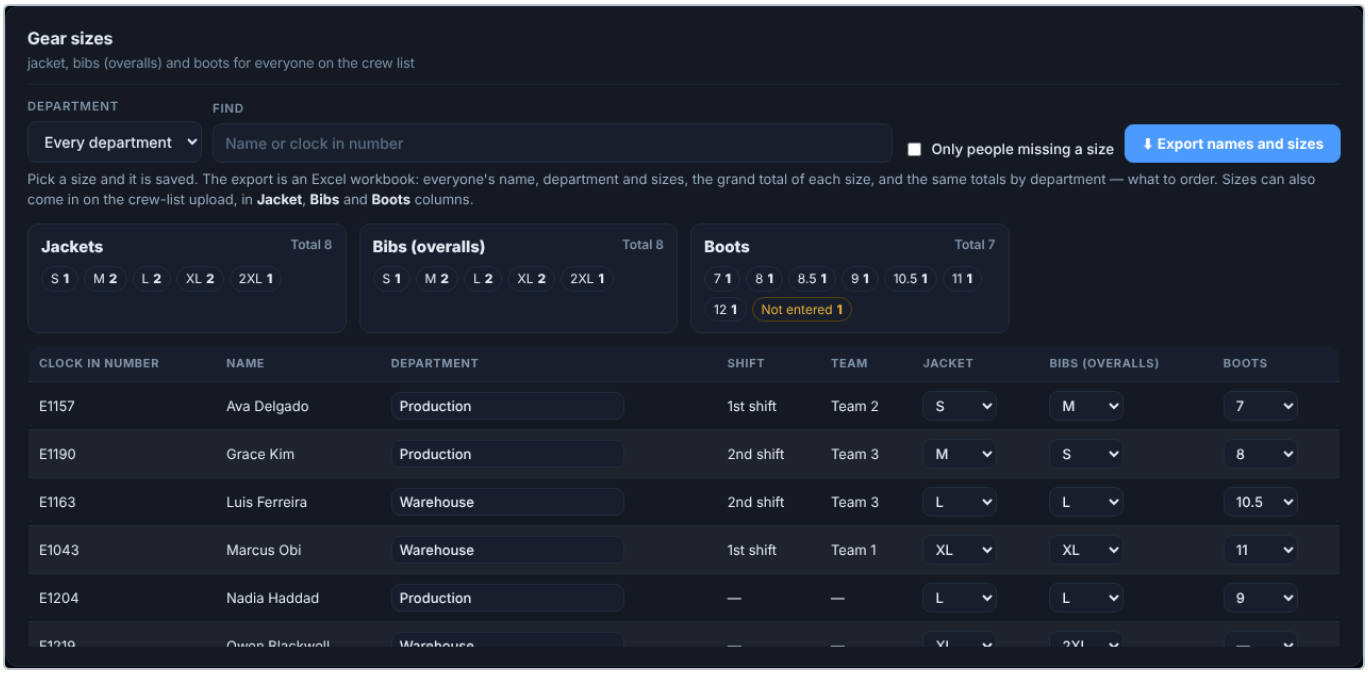

Reach truck · freezer

Scan either code at sign-on, in **Team number**

6 — Gear sizes, and the order

Teams & crew → Gear sizes.

Gear sizes: the totals above, everyone below.

1. Everyone on the crew list, a row each. **Pick a size and it is saved** — the cell flashes green. The department can be typed here too. Jackets and bibs run XS to 5XL; boots 5 to 16 in half sizes.
2. The three boxes above are the **totals**: how many of each size, the **total** of each item, and how many people have **not entered** a size (amber).
3. Narrow it with **Department**, **Find**, or **Only people missing a size** — the list to chase before the order goes in.
4. **⬇ Export names and sizes** downloads an Excel workbook: and the number of people;
   - *Names and sizes* — everyone, by department, with their team and three sizes;
   - *Grand totals* — each size of each item, the *not entered* count, a **grand total** per item,
   - *By department* — the same totals for each department.

With a department picked, the export is that department alone.

7 — Who may do what

Under **Settings → Logins**, a login's *May use* list has ticks for each tab of Teams & crew:

TICK	GIVES
Teams & crew (the whole page)	Everything here
Teams & employees	The Teams and Employees tabs: add, edit, remove, teams, the counting plan
Gear sizes	The Gear sizes tab alone — for whoever orders the gear
Equipment rules	The level rules

8 — When something is not right

YOU SEE	WHAT IT MEANS	WHAT TO DO
Gun: *Not signed on — see a supervisor* (*E9999 is not on the crew list*)	That clock-in number is not on the crew list	**Add employee** with that number; they sign on again
E1043 is already Marcus Obi on the crew list	The number is someone else's	**Edit** that person, or check the badge
A size is not in the pick-list	It came in on an upload written another way (*L TALL*, *11W*)	It is kept and shown as written; pick a listed size to change it
Sizes vanished after an upload	They did not — a file with no size columns leaves them alone. Check the file had sizes in the wrong column	Re-upload with *Jacket*, *Bibs*, *Boots* headings
Not on the crew list yet on a team card	A name on the team sheet with no clock-in number on the list	Add them under Employees, then upload the team sheet again
The Gear sizes tab only	The login has *Gear sizes* alone	That is on purpose; an admin adds *Teams & employees* if they need more
