The trainer's key — what is where, and what each spot teaches

Hang the rack labels in this order, left to right, level A low and level B above it; hang each pallet label under the rack it names. Keep this page off the wall.

Rack	Report says	On the wall	The lesson
T01A001	TRN-1001 · Strawberry sliced IQF · 40	TRN-1001	A plain one: rack, pallet, quantity. Count 40.
T01A002	TRN-1002 · Blueberry wild IQF · 32 TRN-1003 · Blueberry wild IQF · 28	TRN-1002 TRN-1003	Two pallets in one spot: count both, scanning the rack once for each.
T01A003	*empty (OPEN)*	*nothing*	An empty spot on the report and on the wall: scan the rack, tap Bin is EMPTY, Yes.
T01A004	TRN-1004 · Mango chunks IQF · 36	TRN-1004	A short count: the report says 36 — have the class count 30. The office gets a QTY VARIANCE and a second count.
T01A005	TRN-1005 · Peach slices IQF · 30	*nothing*	The report expects TRN-1005 here, but it is hanging under T01A006: scan the rack, Bin is EMPTY. The office sees it MISSING here and WRONG BIN there.
T01A006	*empty (OPEN)*	TRN-1005	An empty spot on the report with a pallet in it (TRN-1005 from next door): count it as normal. The scanner takes it; the report shows WRONG BIN.
T01A007	TRN-1007 · Pineapple tidbits IQF · 44	TRN-1007 TRN-9999	A pallet nobody expected: TRN-9999 is not on the report. The scanner asks "Count it anyway?" — YES. It shows as NOT IN MASTER.
T01A008	TRN-1008 · Raspberry whole IQF · 24 TRN-1009 · Raspberry whole IQF · 24	TRN-1008 TRN-1009	One pallet wearing two labels (TRN-1008 and TRN-1009 are the same skid): tap "This pallet has more than one label", scan the rack once, then each label with its quantity, then Done.
T01B001	TRN-1010 · Dark sweet cherries pitted IQF · 36	TRN-1010	A label that will not scan: its barcode is printed torn. Tap "Label will not scan" → "I can read it — let me type it" and type TRN-1010.
T01B002	TRN-1011 · Blackberry whole IQF · 40	TRN-1011	Level B: a plain pallet up top. Count 40 — then press Back once to show how a wrong entry is undone.
T01B003	*empty (OPEN)*	*nothing*	Empty, as the report says.
T01B004	TRN-1012 · Mixed berries IQF · 26	TRN-1012	The last spot of the aisle. When it is counted the scanner says every bin has a count: tell the supervisor, who marks T01 done on the Team plan, and T02 appears.
T02A001	TRN-2001 · Banana slices IQF · 50	TRN-2001	Aisle T02, for the second team or the second half of the class. Plain.
T02A002	TRN-2002 · Strawberry sliced IQF · 40	TRN-2002	Plain. Count 38 to raise a second count for the other team to walk.
T02A003	*empty (OPEN)*	*nothing*	Empty.
T02A004	TRN-2004 · Mango chunks IQF · 36	TRN-2004	Two pallets. After the first, have the class scan the rack of T02A005 by mistake and count TRN-2006 there: the scanner takes it, then Next bin

	TRN-2005 · Peach slices IQF · 30	TRN-2005	points back at T02A004 (1 of 2 tags) and sends them back for TRN-2005.
T02A005	TRN-2006 · Pineapple tidbits IQF · 44	TRN-2006	Already counted by the mistake at T02A004 — and the place to press SOS once, so the class sees the office answer on the scanner.
T02A006	TRN-2007 · Dark sweet cherries pitted IQF · 36	TRN-2007	The last spot. Then Sign off this scanner, and the next trainee signs on with their own badge.

Cycle count practice — on the same wall

A second training count, **Training cycle count — not real stock**, has a list of 6 bins on this wall. On the scanner: tap **Cycle count** at the top of the sign-on screen, pick it, scan **one badge** — on a cycle count the person is the team — then **Sign on & load list** and **Start counting the list**. Each bin is counted as it stands, then **Bin done**.

#	Bin	On the wall	The lesson
1	**T01A002**	TRN-1002 TRN-1003	Two pallets in one bin: count both — rack, pallet, quantity, each time — then tap Bin done. The next bin on the list comes up.
2	**T01A003**	*nothing*	Nothing in it: scan the rack, Bin is EMPTY, Yes. An empty bin finishes by itself.
3	**T01A007**	TRN-1007 TRN-9999	TRN-1007 and TRN-9999: count TRN-1007, then TRN-9999 asks Count it anyway? — YES, count it. Then Bin done.
4	**T01B001**	TRN-1010	The torn label: Label will not scan → I can read it — let me type it → TRN-1010 on the scanner's keys. Then Bin done.
5	**T02A004**	TRN-2004 TRN-2005	Scan the rack of T02A005 first, by mistake: the scanner refuses it — this cycle count is for T02A004. Then count both pallets and tap Bin done.
6	**T02A006**	TRN-2007	The last bin on the list. Count it and tap Bin done: the list is empty. Sign off this scanner, and the next trainee signs on with their own badge.

Teams and badges

Team	Shift	Plan	Badges
S1-DS01	1st	T01, levels A–B	TRN-01 Marcus Obi TRN-02 Priya Raman TRN-03 Tom Zane
S1-DS02	1st	T02, level A	TRN-04 Ava Diaz TRN-05 Luis Ferrer TRN-06 Grace Kim
S2-DS01	2nd	T01 then T02, after the day teams	TRN-07 Jordan Lee TRN-08 Sam Ortiz

Every code is Code 128, as the racking is. Scan from arm's length on the big labels. The scanners see the count as a **trial run**; Testing Suite → Classroom training → **Reset for the next class** clears it.
