STANDARD OPERATING PROCEDURE · BY ROLE

How to
Run the training day

For: Trainers, count supervisors · Full Harvest Inventory

This is the trainer's run sheet: what to print and hang the day before, how a two-hour session goes, what to say at each spot on the wall, what the office screen shows while the class counts, and how to reset between groups. Everything the class scans is a real count in the app — the only difference from count day is the name on it: **Training count — not real stock**.

1 — What you need

THING	WHERE IT COMES FROM
The film, English and Spanish	`docs/training/scanner-training-full-en.mp4` and `-es.mp4`, 1080p, about ten minutes each
The slide deck, English and Spanish	`docs/training/scanner-training-full-en.pptx` and `-es.pptx`, narration in the speaker notes
The wall: 18 rack labels, 18 pallet labels, 3 team cards, 8 badges	**Testing Suite → Classroom training → 🖨 Print the wall**
The trainer's key	the last pages of the same print: every spot, what the report says, what hangs there, the lesson
Pocket cards, four to a page	**🖨 Pocket cards · English** and **🖨 Tarjetas · Español** — one per person, laminated if you can. Paste the team numbers into the box above the buttons, one line per person, and each card gets that person's **team card** (QR and barcode) on the back
On the scanner	**User guide → On the scanner**: one page for each thing that is different on a full count — two labels, no label, a rack label that will not scan, empty bins, a pallet not on the list and the rest. Print the booklet for the break room and the leads
Check-off sheets, the quiz, the words	the same card, **For each trainee**: a sheet per person the trainer signs as they do each thing on the wall (filled from the roster's not-yet-trained, or blank); a ten-question quiz with its answers; the scanner's words in English and Spanish. English and Spanish, print or Word
The roster	the same card, under the buttons: every employee from Teams & crew with a box to tick as they finish; **🖨 Print the roster** for a clipboard copy
Scanners	three or four, charged, on the site's Wi-Fi, the app open at the sign-on screen
A screen	the break-room TV or a projector, for the film, the deck and then the Dashboard
Tape	the labels go on a wall, a whiteboard or two tables pushed together

Everything printed here is also a Word document, to edit in the site's own words before printing: the **⬇ .docx** buttons on the Classroom training card for the wall, the cards and the roster, and **⬇ Word** beside this guide on the User guide page. The deck's second-to-last slide, *The buttons, on one page*,

prints for the wall of the break room. The cycle-count films (`scanner-training-cycle-en.mp4`, `-es.mp4`) are for the people who will do cycle counts, not for count day.

2 — The day before

1. **Testing Suite** in the sidebar, as an admin. Under **Classroom training** press **Set up the training count**. It makes the count — 18 bins in two short aisles, T01 and T02, with 17 pallets on its inventory report — plus three training teams (S1-DS01, S1-DS02, S2-DS01) and eight trainee badges (TRN-01 to TRN-08), and plans T01 for S1-DS01 and T02 for S1-DS02. It is a trial run: nothing on it ever reaches the ERP file, and the scanners see it as **Training count — not real stock**. It also makes **Training cycle count — not real stock**: the same wall, with a list of six bins for practising cycle counts (section 5a).
2. 🖨 **Print the wall (big labels)**. One label per page: rack labels first, then pallet labels, then the team cards and badges, then the trainer's key. 🖨 **Small labels** puts two to a page for a table-top version.
3. 🖨 **Pocket cards**, English and Spanish, one card per person. For the real teams, paste the team numbers into the box on the card first — one line per person, so a team of three is three lines — or press **Fill from Teams & crew**. Every sheet of four fronts is then followed by its backs, mirrored: print double-sided, flipped on the long edge, and each person's team card lands on the back of their pocket card. Cut along the lines.
4. Open the Dashboard with the training count picked at the top and check **Team plan** shows S1-DS01 counting T01 and S1-DS02 counting T02. Nothing else to set.
5. Sign one scanner on yourself — team card S1-DS01, badge TRN-01 — and scan the first two spots of the wall, so you have seen it work on this network. Then **Reset for the next class** so the class starts clean.

3 — The wall

Hang the rack labels in two rows, like two short aisles, and the pallet label the key says under each. Left to right:

SPOT	ON THE REPORT	HANG UNDER IT	THE LESSON
T01A001	TRN-1001 · 40	TRN-1001	A plain one: rack, pallet, quantity
T01A002	TRN-1002 · 32, TRN-1003 · 28	both	Two pallets in one spot
T01A003	nothing	nothing	An empty spot: Bin is EMPTY
T01A004	TRN-1004 · 36	TRN-1004	A short count: the class counts 30
T01A005	TRN-1005 · 30	nothing	The pallet is next door: Bin is EMPTY here
T01A006	nothing	TRN-1005	A pallet where none was expected: count it as normal
T01A007	TRN-1007 · 44	TRN-1007 and TRN-9999	A pallet nobody expected: Count it anyway? YES
T01A008	TRN-1008 · 24, TRN-1009 · 24	both, marked one skid	One pallet with two labels
T01B001	TRN-1010 · 36	TRN-1010, printed torn	A label that will not scan: type it
T01B002	TRN-1011 · 40	TRN-1011	Level B, plain; then Back once
T01B003	nothing	nothing	Empty, as the report says
T01B004	TRN-1012 · 26	TRN-1012	The last spot: every bin has a count, tell the supervisor
T02A001	TRN-2001 · 50	TRN-2001	Aisle T02, plain
T02A002	TRN-2002 · 40	TRN-2002	Count 38: a second count for the other team
T02A003	nothing	nothing	Empty
T02A004	TRN-2004 · 36, TRN-2005 · 30	both	Two pallets; leave one and let Next bin send you back
T02A005	TRN-2006 · 44	TRN-2006	Plain, and the place to press SOS once

SPOT	ON THE REPORT	HANG UNDER IT	THE LESSON
T02A006	TRN-2007 · 36	TRN-2007	The last spot; Sign off, next trainee signs on

Level B of T01 hangs above level A. The team cards and badges go on a table by the door, where the class signs on.

4 — The session, minute by minute

About two hours for a group of eight; split a bigger group into two wall sessions.

WHEN	WHAT	WHO
0:00	Why we count, and the one rule: **count what is really there**	supervisor, 5 min
0:05	The film, in the room's language, on the big screen	10 min
0:15	The deck, scanners in hand, trainer at the front. Stop on every *tip* box	25 min
0:40	Hand out the pocket cards. Read the five rules out loud	5 min
0:45	**The wall, team one**: S1-DS01 signs on with its card and three badges and counts T01. The rest of the class watches the Dashboard on the big screen	25 min
1:10	**The wall, team two**: S1-DS02 counts T02. Team one watches the second counts appear	15 min
1:25	The second counts: S2-DS01 signs on and walks the second counts raised by the two short counts	10 min
1:35	The office screen: the Pallet report with the class's own mistakes on it, in words. Then the quiz, ten questions, and its answers together	15 min
1:45	Questions; everybody signs on once with their own badge; sign off; scanners on the chargers	15 min
+0:20	**Cycle counts**, for the people who will do them: one trainee at a time works the six-bin list (section 5a)	20 min

Let a different person hold the scanner at every spot. The person scanning reads the top line of the screen out loud before they do anything: that habit is most of the training.

5 — The wall run-through, spot by spot

Stand beside the wall with the trainer's key. At each spot, say what the scanner will do before the trainee does it.

Sign on. Team card S1-DS01 into *Team number*, then each badge. Each name shows. **Sign on & load list**. The scanner says *Your aisle: T01, levels A–B*; **Start counting**. Point at **Next bin: T01A001** on the gun.

- **T01A001** — the three steps. Rack, beep. Pallet, beep. Count the 40 on the label's line, type 40, Enter. Skip the comment. *Next bin* moves to T01A002.
- **T01A002** — two pallets. After the first, the box turns orange: *Still in this bin, 1 of 2*. Rack again, second pallet, its quantity. Say it: never leave a spot half counted.
- **T01A003** — empty. Rack, then **Bin is EMPTY**, **Yes**. An empty spot that is not recorded looks like one nobody reached.
- **T01A004** — the short count. The label says 36; have the class count **30** and type 30. The scanner says nothing: it is a blind count. On the Dashboard a second count appears within a few seconds. Show it.
- **T01A005** — nothing hangs here. Rack, **Bin is EMPTY**. The report expected TRN-1005: the office now sees it MISSING here.
- **T01A006** — TRN-1005 hangs where the report has nothing. Count it as normal. The report shows it as WRONG BIN: the office knows exactly where it went.
- **T01A007** — two labels, one of them TRN-9999, which is on no report. After its barcode the scanner asks **Count it anyway?** — **YES**, count it. Found stock is never lost.
- **T01A008** — one skid wearing two labels. Rack, then **This pallet has more than one label**, then each label with its cases, then **Done**. The rack is scanned once.
- **T01B001** — the torn barcode. Try the trigger twice; it will not read. **Label will not scan → I can read it — let me type it** → type TRN-1010 → its quantity. The office gets a list of labels to reprint.
- **T01B002** — level B, plain. Type 40, then press **Back** once to show a step undone, and type 40 again. Then show the other fix: tap **History** — only this team's lines, in the last twenty bins — and **Void this line** on T01B001. The gun jumps back to the scan screen with **Go back to T01B001**: scan its rack and the pallet again. A void never leaves a hole behind.
- **T01B003** — empty, as the report says. Rack, **Bin is EMPTY**, **Yes**.
- **T01B004** — the last spot. After it the scanner says *every bin in T01 has a count — tell your supervisor*. There is no button for this on the gun. On the big screen, **Team plan → T01 → done**: the scanner's **My aisle** shows the next one.

Team two signs on with S1-DS02 and counts T02 the same way. T02A002: count **38** for a second count. T02A004: after the first pallet, scan the rack of T02A005 by mistake and count TRN-2006 there — the scanner takes it, and then **Next bin** points back at T02A004, *1 of 2 tags*: the gun sends you back for the pallet you left. Count TRN-2005 and the spot is whole again. T02A005 is already done; it is the place to press **SOS — I need help** and pick a reason: on the Dashboard **Alerts** flashes, a supervisor presses **I am on it**, and the scanner says who has seen it. T02A006: **Sign off this scanner**.

The second counts. S2-DS01 signs on with its card and two badges. **My aisle** shows **Start second counts**: the two short counts from the wall. At each, count everything in the spot — rack, pallet, quantity — and the gun moves to the next one by itself once the pallet is counted. The second count agrees with the label, so the office sees the first count was wrong.

5a — Cycle counts on the same wall

A cycle count is one person with a scanner and a short list of bins for the day: each bin is counted as it stands, then **Bin done**, and the next bin on the list comes up. The wall is the same; the list is on its own count, **Training cycle count — not real stock**. The trainer's key has it at the back, under *Cycle count practice*. Play the cycle-count film first (`scanner-training-cycle-en.mp4` or `-es.mp4`).

Sign on. At the top of the sign-on screen tap **Cycle count**, and pick the training cycle count. There is no team card on a cycle count: the person is the team, so **one badge** only — TRN-07, say. **Sign on & load list**, then **Start counting the list**. The banner says *CYCLE COUNT · bin T01A002*.

#	BIN	ON THE WALL	SAY AT THIS BIN
1	T01A002	TRN-1002, TRN-1003	Two pallets: rack, pallet, quantity for each, then **Bin done**. The next bin comes up
2	T01A003	nothing	Rack label, **Bin is EMPTY**, **Yes**: an empty bin finishes by itself
3	T01A007	TRN-1007, TRN-9999	TRN-9999 asks *Count it anyway?* — **YES**. Then **Bin done**
4	T01B001	TRN-1010, torn	**Label will not scan** → **I can read it — let me type it** → TRN-1010 on the scanner's keys
5	T02A004	TRN-2004, TRN-2005	Scan T02A005's rack first, on purpose: *This cycle count is for bin T02A004*. Then both pallets, **Bin done**
6	T02A006	TRN-2007	The last one: **Bin done**, and the list is empty. **Sign off this scanner**; the next trainee signs on

On the office side, **Cycle Counts** in the sidebar, with the training cycle count picked, shows the list going down bin by bin, who did each and when. **Reset for the next class** clears the cycle count too and puts the six bins back on the list.

6 — What the office screen shows

Keep the Dashboard on the big screen with the training count picked, and switch tabs as the class goes:

- **Team plan** while they sign on: S1-DS01 goes from *waiting* to *counting now* in T01, and the bar fills as the spots are counted.
- **Second counts** after T01A004: the short count arrives as an open second count for any team but S1-DS01.
- **Alerts** at the SOS.
- **Reports → Pallet report** at the end: TRN-1004 **QTY VARIANCE**, TRN-1005 **WRONG BIN**, TRN-9999 **NOT IN MASTER**, TRN-1010 in the labels-to-fix list, and the empties recorded. The class sees their own morning in the words the office uses.

The report's Cost columns are there too; the point to make is that **the scanner never showed a cost or an expected quantity**.

7 — The roster: who has been trained

Under the buttons on the Classroom training card is the **Training roster**: every employee uploaded on Teams & crew (the wall's eight trainees are not on it), with their shift, team and department. As each person finishes the wall, tick their box. The app keeps who ticked them and when, and the summary at the top counts the trained by shift, so at the end of the day you can see who still needs a session.

- **On the wall** fills in by itself when a person's own badge signs on to the training count, as a hint; the tick is still yours to give.
- **Not yet trained only**, the shift box and the search narrow the list for a big crew.
- 🖨 **Print the roster** is the clipboard version, a sheet per shift with a box to tick and a line to sign. ⬇ **roster.csv** is the same list for HR or the supervisors.
- A tick can be taken back. Nothing on the roster touches the count itself.

8 — Between classes, and after

- **Reset for the next class** clears every count, sign-on, second count and alert on the training count and puts the aisles back at the start. The wall stays as it is. Press it between groups and at the end of the day.
- **Remove the training count** takes the count, its teams and its trainee badges away. Do this before count day, so the training teams are not on the Crew board and TRN badges cannot sign on.
- **Set up the training count** again next time: everything comes back the same, so the printed wall is still right.
- On count day the real teams sign on with **their** team cards and badges. The pocket card is the same.

9 — Checklist

- ☐ Training count set up; **Team plan** shows T01 and T02 planned
- ☐ The training cycle count shows six bins on its list (the Classroom training card says so)
- ☐ Wall printed and hung in the key's order; TRN-1005 under T01A006, TRN-9999 beside TRN-1007
- ☐ Team cards and badges on the sign-on table
- ☐ Pocket cards cut, in both languages
- ☐ Film and deck open on the big screen in the room's language; Dashboard in a second tab
- ☐ Scanners charged, on Wi-Fi, at the sign-on screen; one spot scanned yourself the day before
- ☐ **Reset for the next class** pressed before the class walks in
- ☐ Roster ticked for everyone who finished; **⬇ roster.csv** sent to the supervisors
- ☐ After the last group: **Reset**, and **Remove** before count day
