STANDARD OPERATING PROCEDURE · BY ROLE

Employees, teams and gear sizes how it works

For: Count supervisors and whoever keeps the crew list · Full Harvest Inventory

Everyone who counts has to be on the crew list: a gun will not sign on with a clock-in number that is not on it. This guide is keeping that list, putting people on teams, and recording each person's department and jacket, bibs and boot sizes.

7 — When something is not right 10

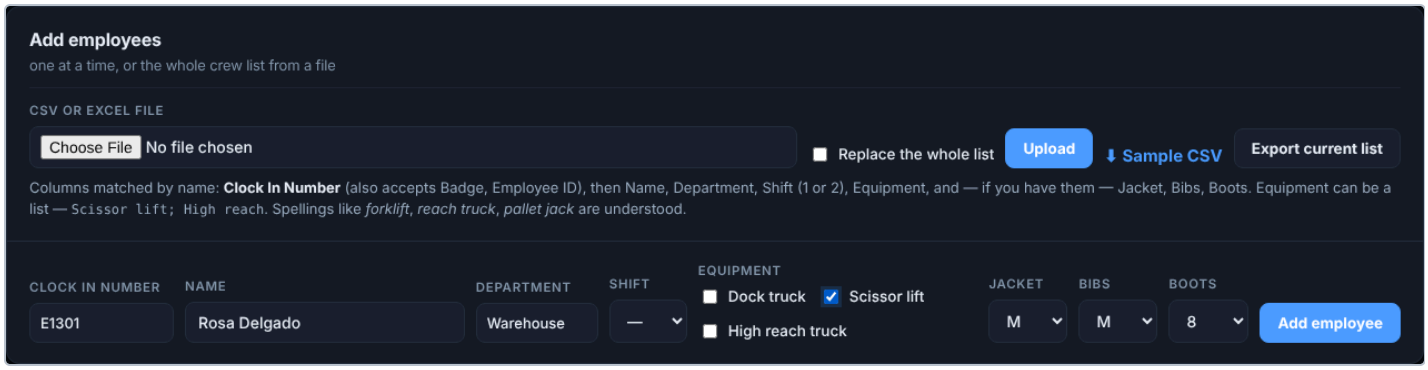

1 — The tabs

TAB	FOR
Teams	Who is on which team today
Employees	The crew list: add, edit, remove, upload, export
Gear sizes	Everyone's jacket, bibs and boots, the totals, and the export to order from
Equipment rules	Which levels need which equipment

You see the tabs your login has.

2 — Add an employee

Teams & crew → Employees → Add employees, the bottom row:

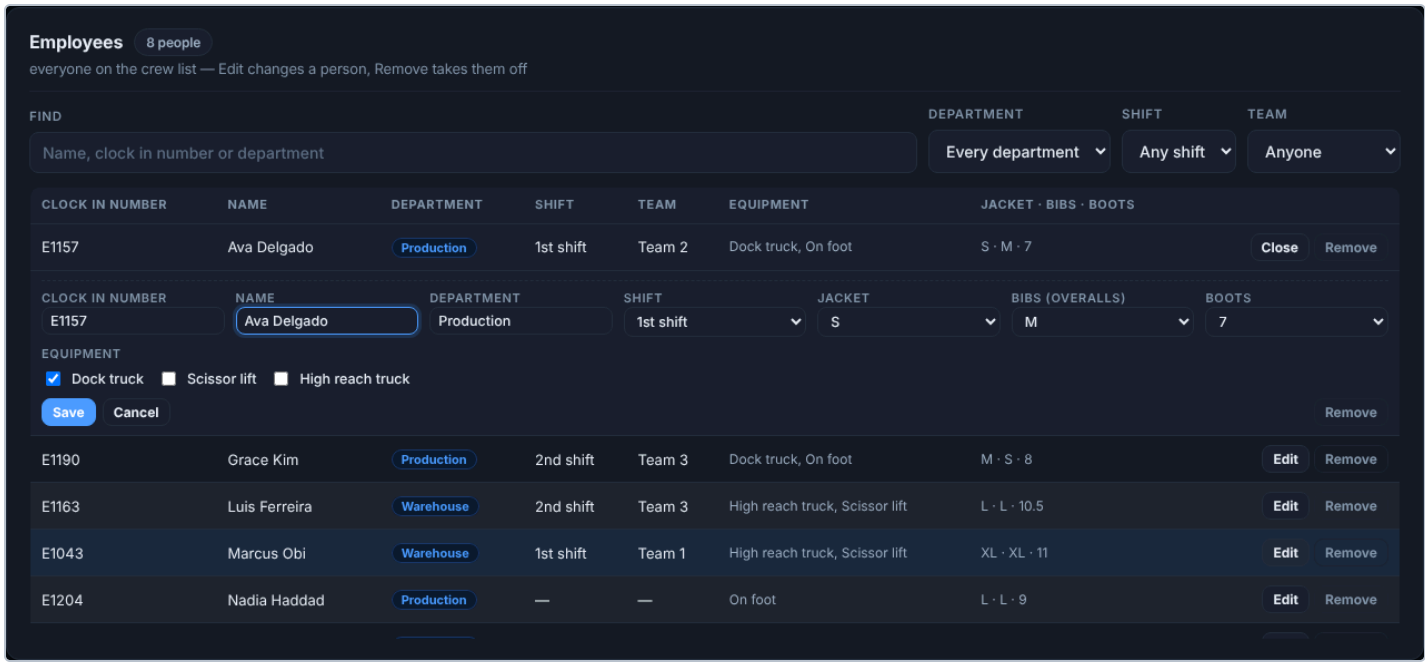

Add employees: one at a time on the bottom row, or the whole list from a file above it.

1. **Clock in number** (from their badge) and **Name** — both needed.
2. **Department**, the **Equipment** they are certified on, and **Jacket**, **Bibs**, **Boots** — all optional, and can be added later.
3. **Add employee**, or Enter in the Name box. The form clears for the next person.

They can sign on to a gun straight away. A clock-in number already on the list is refused, with the name it belongs to — **Edit** that person instead.

3 — Edit or remove an employee

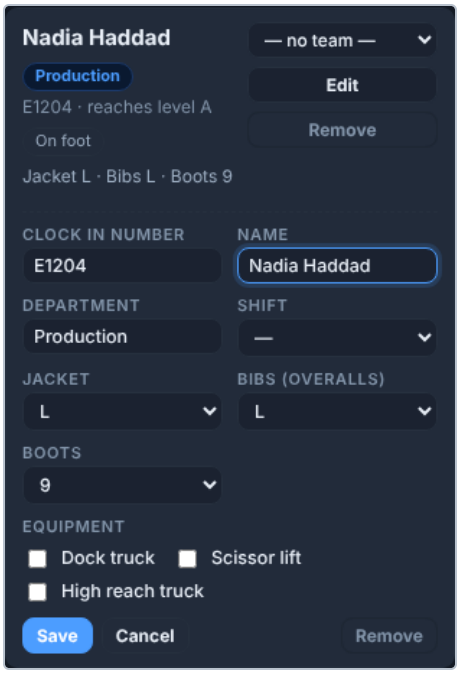

Teams & crew → Employees lists everyone, whatever team they are on.

The Employees table, with one row open for editing.

- **Find** a name, clock-in number or department; **Department**, **Shift** and **Team** narrow the list.
- **Edit** opens the person under their row: clock-in number, name, department, shift, sizes and equipment. Change what you need and press **Save**. A new clock-in number asks first; their team goes with them, and counts already scanned keep the old number.
- **Remove** (on the row, or in the Edit form) asks first, then takes them off the crew list and off their team. Their counts stay as they are. A removed number can no longer sign on.

Each person's card on the **Teams** tab has the same **Edit** and **Remove**:

A card on the Teams tab with Edit open.

4 — The crew list from a file

Employees → Add employees → CSV or Excel file → Upload brings in the whole list at once. Its columns: **Clock In Number** (required), **Name**, **Department**, **Equipment**, and if you have them **Jacket**, **Bibs**, **Boots**. **⬇ Sample CSV** downloads one in the right shape.

- Someone already on the list is brought up to date; someone new is added. Nobody is taken off unless **Replace the whole list** is ticked.
- Sizes are read however they are written — *xx-large* is **2XL**, *10 1/2* is **10.5**. A file without size columns leaves the sizes already there.
- **Export current list** downloads the list as it stands.

Employees and teams at once. Teams & crew → Employees → Crew workbook takes one Excel file with an **Employees** sheet and a **Teams** sheet, or one sheet with both. **Check the workbook** says what does not match — a person on a team who is not on the list, a person on two teams, a shift that disagrees with the team's — then **Apply** loads both. **⬇ Sample workbook** shows the columns.

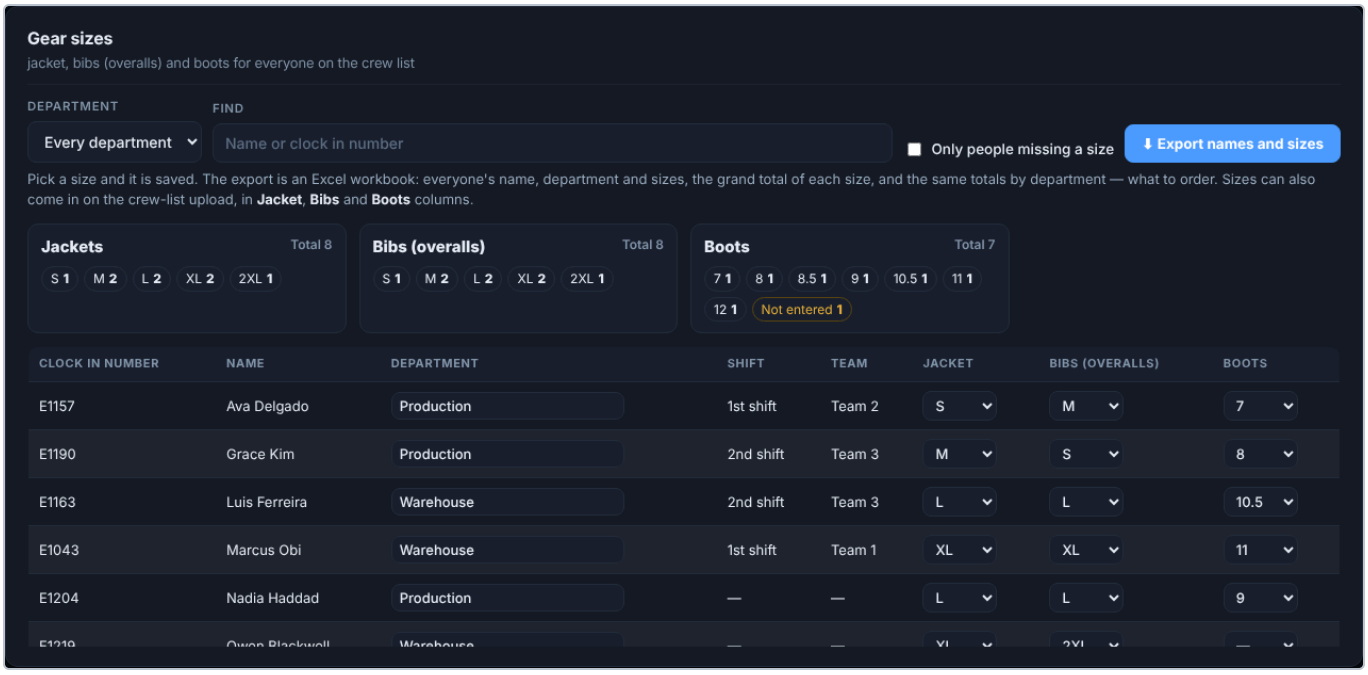

5 — Teams

Teams & crew → Teams.

- **Drag** a person from *Not on a team* onto a team card, or between teams — or use the menu on their card. **— no team —** takes them off.
- Each card shows the person's **department** and **shift**, equipment and sizes.
- **Upload the team sheet** (*Team #, Department, Employee, Equipment*, a row per seat) builds the teams in one go: *S1-DS01* is 1st shift, dock stocker, truck 01.
- **1st shift / 2nd shift** and **Department** show one at a time.
- **The crew board** (`/crew`) is the same list for a screen by the time clock: each shift's teams and who is on them, the shift on now marked, and where each team is counting — its aisle, last scan, and **Scanning** or a red **Stopped scanning**. No sign-in, no clock-in numbers. It shows one shift at a time and scrolls by itself when the list is longer than the screen; an admin picks the shift, what each card shows and the scroll speed.
- **⬇ Export the teams (CSV)** downloads every team across both shifts, one row a seat, with the shift on every row, so the shifts compare side by side in Excel.
- 🖨 **Print team QR codes** prints a card per team with its number as a QR code, for every team or one shift. At sign-on, scan the card into **Team number** on the gun instead of typing it. Each card has the number as a QR and as a barcode like the rack labels, so any scanner reads one of them; the number is printed large as well.

6 — Gear sizes, and the order

Teams & crew → Gear sizes.

The totals above, everyone below.

1. **Pick a size and it is saved** — the cell flashes green.
2. The boxes above are the **totals**: each size, the total per item, and how many people have **not entered** a size yet.
3. **Only people missing a size**, **Department** and **Find** narrow the list — the people to ask before the order goes in.
4. **⬇ Export names and sizes** downloads an Excel workbook: *Names and sizes* (everyone, by department), *Grand totals* (each size and a grand total per item), and *By department*. Pick a department first for that department alone.

7 — When something is not right

YOU SEE	WHAT IT MEANS	WHAT TO DO
Gun: *Not signed on — see a supervisor* (*E9999 is not on the crew list*)	That clock-in number is not on the list	**Add employee** with it; they sign on again
E1043 is already Marcus Obi on the crew list	The number is someone else's	**Edit** that person, or check the badge
Not on the crew list yet on a team card	A name on the team sheet with no clock-in number on the list	Add them under Employees, then upload the team sheet again
A size reads oddly (*L TALL*, *11W*)	It came in on a file written that way	It is kept as written; pick a size to change it
A tab is missing	Your login does not have it	Ask an admin
